

ELIWANA RC50

CLIENT	FORTESCUE METALS GROUP
LOCATION	PILBARA, WA
SIZE	304-PERSON MOBILE CAMP AND FACILITIES
TIMEFRAME	HANDOVER WITHIN 5 WEEKS

Late 2019, Ausco Modular’s Remote Accommodation team successfully mobilised a 304-person camp to site at the Eliwana Mine and Rail project in the Pilbara, Western Australia.

Fortescue Metals Group’s US\$1.375 billion project included the development of 143 kilometres of rail, a 30 million tonnes per annum dry ore processing facility and infrastructure, with first ore on train delivered in December 2020.

The mobile camp was installed to accommodate Fortescue’s workforce during the construction of the railway.

Due to the site location being three hours from the nearest town of Newman and six hours from the city of Karratha, Ausco’s team had to ensure they were prepared and equipped to complete the project.

All transport logistics for the build were coordinated in a smooth and timely manner to ensure items arrived within the required timeframe for each project milestone. The success of these logistics ensured the installation of the camp was completed and handed over within five weeks.

The mobile camp facility includes 304 single occupancy ensuited rooms, a large kitchen and dining facility for catering purposes, first aid room, laundries, office and administrative facilities and a sewerage treatment plant. The operation of the camp was supported by four water treatment plants and three generators.

The client also requested an open and interactive recreation space for their teams to unwind at the end of their workday, and a gymnasium to support the company’s health and wellness program requirements.

Ausco Modular’s team excelled in providing exceptional service for Fortescue and completed works within the required time frame and to all necessary safety standards, creating good customer relations and an ease of set up experience for the customer.
