

JEERALANG POWER STATION

CLIENT	ENERGYAUSTRALIA
LOCATION	MORWELL, VIC
SIZE	9 MODULES
VALUE	\$940,000
TIMEFRAME	6 WEEKS ON SITE

The Jeeralang Power Station is located in rural Latrobe Valley, approximately 150km south-east of Melbourne and about 6km south of Morwell.

Jeeralang consists of seven open cycle gas turbines with a total capacity of 450MW, and whilst one of the gas turbine devices was shut down for routine maintenance, EnergyAustralia engaged Ausco Modular to install a new office and administration space to accommodate their team on site.

The new building, consisting of nine modules, was craned into place over two days with initial site preparation works, building connections and the completion of external ramps and stairs totalling just six weeks on site.

The project was delivered by Ausco's team throughout the COVID-19 pandemic, which saw extra safety and hygiene measures in-place to ensure the wellbeing of the team and contractors on site. The project was delivered early to the delight of the customer.

Well done to all involved.
