# LSR 4

Never walk under a suspended load.

## RISK

Falling objects and buildings can increase the risk of people being crushed by falling or moving objects.

## WHERE THIS RISK MAY APPLY TO YOU:

- > A suspended load during lifting, loading or unloading of buildings or equipment;
- > Working below other work areas where others are working above you;
- > When working underneath a building undertaking preparation work;
- > Working in storage areas where equipment is being stored;
- > When moving buildings with forklifts or cranes, and travel paths may move over workers below.

## PERSONAL BEHAVIOURS

- > I can use the correctly engineered equipment including props and stands.
- > I can make sure that drivers remain in the 'safe zone' by educating them about the risks to themselves.
- > I can 'stop the job' if unauthorised people move into an 'no-go' zones.
- > I can make sure I have good visual contact & communication with mobile equipment operators before approaching mobile equipment.
- > I can make sure I know the 'blind spots' around large mobile equipment.
- > I can make sure loads are stable on forklifts & secure on trucks before movement / transport.
- > Make sure correct load restraint is undertaken.
- > I can make sure I never lift loads over the top of workers by checking travel paths are clear.
